

Case Studies: Real Results

Measurable Outcomes from Spartan Method Implementation

CASE STUDY 1: REGIONAL SNF NETWORK

The Challenge

A 12-facility skilled nursing network struggled with late hospice referrals, resulting in average hospice length of stay under 7 days. Staff burnout was high due to complex end-of-life care without hospice support.

The Spartan Approach

- Discovery: Mapped referral processes at each facility
- Connecting: Built relationships with DONs and social workers
- Guiding: Presented data on staff burden reduction with earlier referrals
- Commitment: Implemented facility-specific referral protocols

The Results

- Average hospice length of stay increased from 7 to 28 days
- Staff satisfaction scores improved 23% in 6 months
- Family satisfaction ratings increased to 94%
- Monthly referrals grew from 8 to 31 across the network

CASE STUDY 2: HOSPITAL DISCHARGE OPTIMIZATION

The Challenge

A 400-bed acute care hospital faced readmission penalties and low patient satisfaction scores. Hospice referrals were reactive, often made in the final 24 hours of hospitalization.

The Spartan Approach

- Discovery: Analyzed discharge data and identified high-risk patient patterns
- Connecting: Engaged case management leadership on shared goals
- Guiding: Demonstrated hospice impact on readmission rates
- Commitment: Integrated hospice screening into discharge planning rounds

The Results

- On-time hospice discharges increased from 62% to 89%

- 30-day readmission rate for hospice-eligible patients dropped 34%
- HCAHPS scores for discharge process improved 18 points
- Partnership expanded to include palliative care consults

KEY SUCCESS FACTORS

- 1 Patient Focus**
Every conversation centered on patient outcomes, not sales metrics
- 2 Stage Discipline**
No rushing through the Sales Mastery Model stages
- 3 Data-Driven**
Measurable outcomes tracked and shared with partners
- 4 Relationship Investment**
Long-term partnership mentality over transactional approach

USING CASE STUDIES

When presenting case studies, always ask first: "Would it be helpful if I shared how a similar facility addressed this challenge?" Let them invite the story rather than forcing it.
